

BPL has been abandoned in every country they have tried it in. The reason is gross Interference with all radio Communications between 1.8mhz and 80mhz. To allow Power Companies in the U.S. to utilize BPL for creating additional revenue is not worth the loss of all communications between the afoementions frequencies. It will destroy HF communications in this country as well as nearby countries. BPL is a bad idea out of control.

Thank you for your time and kind consideration

P.M. Ackermann, W4SFD
